

# Activities

1. Embed an audio file in an HTML page with the following requirements:
  - Player has controls to play, pause, seek, etc
  - Audio must automatically start playing when page loads
  - Audio must be muted when playback begins
2. Create a HTML audio player that plays an audio file of your choice in Google Chrome, Internet Explorer and Mozilla Firefox. Use multiple sources if you have to.
3. Create a HTML video player that plays a video file of your choice in Google Chrome, Internet Explorer and Mozilla Firefox. Use multiple sources if you have to.
4. Create a WebVTT file for [this video](#). Then embed this video in an HTML page with the captions you created.

Please post your observations and findings in the discussion below.

**Note:** If you wish to share your HTML code in the discussions, you can paste your code directly in a discussion forum post (highlight code and Ctrl+K/use the code widget) or use one of the following online code editors:

- JS Bin: <http://jsbin.com> ([JS Bin tutorial](#))
- CodePen: <http://codepen.io> ([CodePen tutorial](#))

These are HTML, CSS, and JavaScript code editors that preview/showcase your code bits in your browser. It helps with cross-device testing, realtime remote pair programming.

(or create [Github](#) pages for your work if you know how to use it).
