

# Recipe project

This week we're going to continue building on on the recipe project we started last week. You can find our version of the Week 1 project [here](#). Feel free to build on your own or on that one, whichever you prefer. We can apply some of what we've learned this week to improve our page, both in terms of looks a structure. Also, I've added a couple more recipes, so we have a more realistic situation, i.e. multiple recipes rather than just one.

Try to make good use of semantic elements, images and hash links to get something like this:

# My Favorite Recipes

- [Tacos](#)
- [Pizza](#)
- [Potatoes](#)

## Tacos

### List of ingredients:

- Ingredient 1
- Ingredient 2
- Ingredient 3

This is how you make recipe 1:

1. First Step
2. Second Step
3. Third Step

## Pizza

When you're done, or if you get stuck, you can check out the video below to see what we did.

Feel free to discuss and ask questions in the discussion section below. Good luck!
