

Activity 2 - Cornerpiece image

For this activity, use [this project file](#). It consists of a very long bit prose and at the end is a single `` tag.

- Get the cornerpiece `` element to appear in the lower right of the viewport. It should not scroll with the rest of the document.
- That cornerpiece likely obscures any text that it overlaps. Try to get the document text to be on top of the cornerpiece. You will have to adjust the HTML to achieve this.
- That cornerpiece is definitely a decorative graphic. Lose the `` tag and use decorative CSS. Again, you will have to change the HTML to achieve this.

NOTE: This activity is best conducted in the XDK (or in CodePen), **not in the discussion forum** below. The discussion forum includes its own stylesheet which may override the styles you want to experiment with.
