A world of possibilities

In some ways, we learned everything about HTML5 back in Week 1. It's a fairly simple format, just a tree full of "elements", which are described by tags, attributes and the content inside the tags; "The rest is details".

Once you know the list of all the possible tags, the list of available attributes and a few special cases like the Document Type Declaration (DTD), self closing tags and "meta" tags, then in some ways you know everything there is to know about the language.

Of course, reality is delightfully more complex than that. Putting this all together to form a coherent Web page can be challenging. Then you throw in CSS and suddenly there is a world of possibilities never dreamt of when the original HTML was defined.

This week, we'll delve into some of those interesting possibilities. Don't worry, there's always more to learn :)
