Activities

STYLE GUIDES, CODING STANDARDS AND BEST PRACTICES

Compare and contrast these two different HTML Style Guides:

- jQuery - https://contribute.jquery.org/style-guide/html/

- Google - https://google.github.io/styleguide/htmlcssguide.xml

Are they consistent with each other? Are there some rules that don't seem to make sense?

Can you find other style guides or coding standards that agree or disagree with some of the suggestions in one of these guides?

Check out the W3C HTML Checker:

- Try "Direct Input" and type some HTML5 code with errors to see what it detects

- Using "Validate by URI" try some popular websites and see if you can find any errors.

Tell us what you discovered in the discussion below.
